OBJECT DETECTION

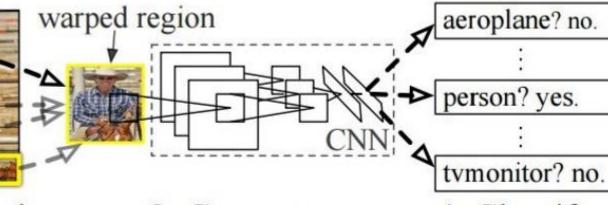

R-CNN: Regions with CNN features

1. Input image

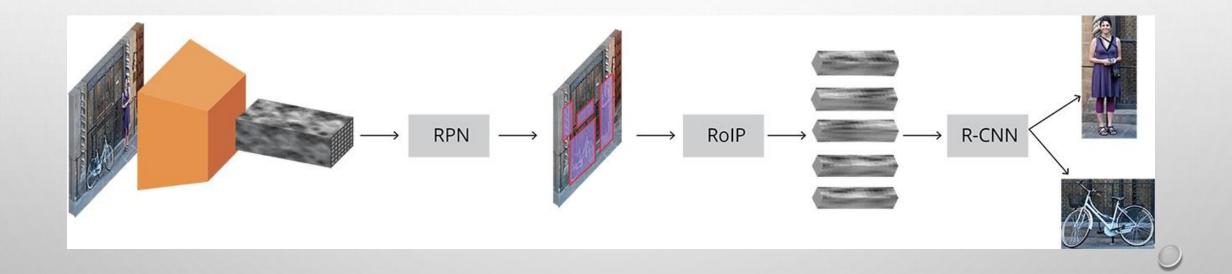

2. Extract region proposals (~2k)

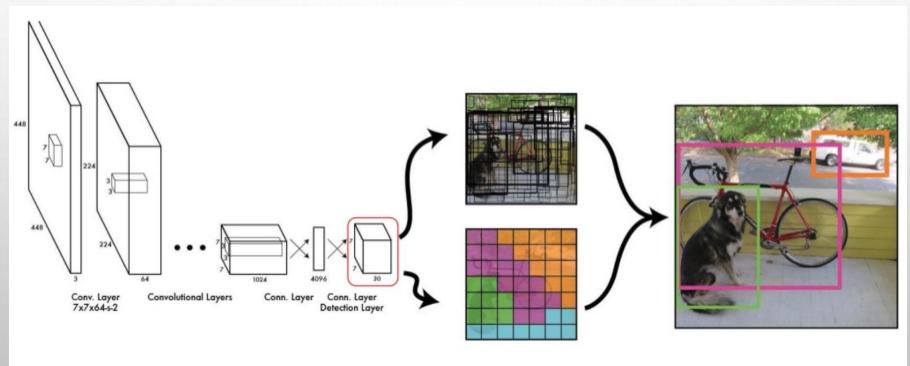

3. Compute CNN features

4. Classify regions

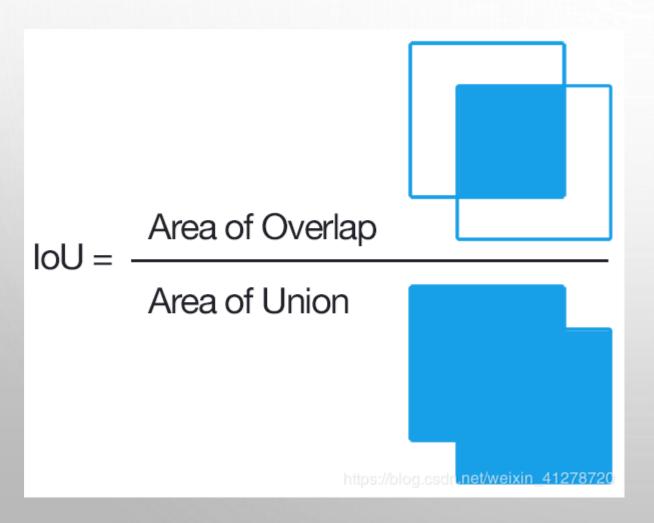

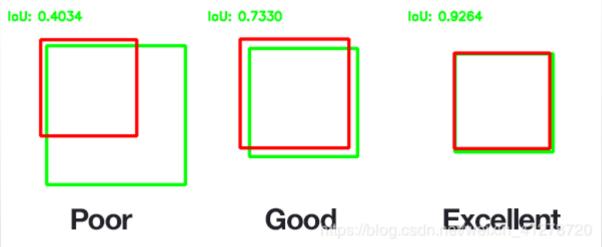

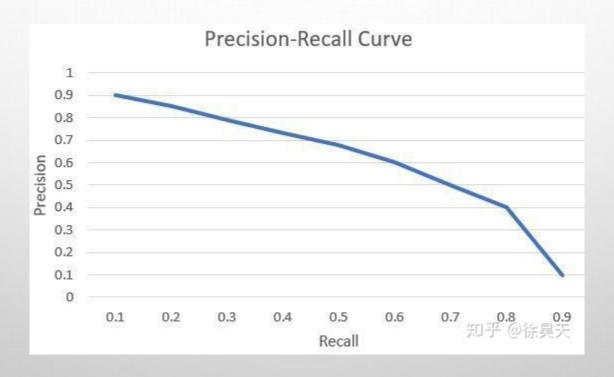

IOU

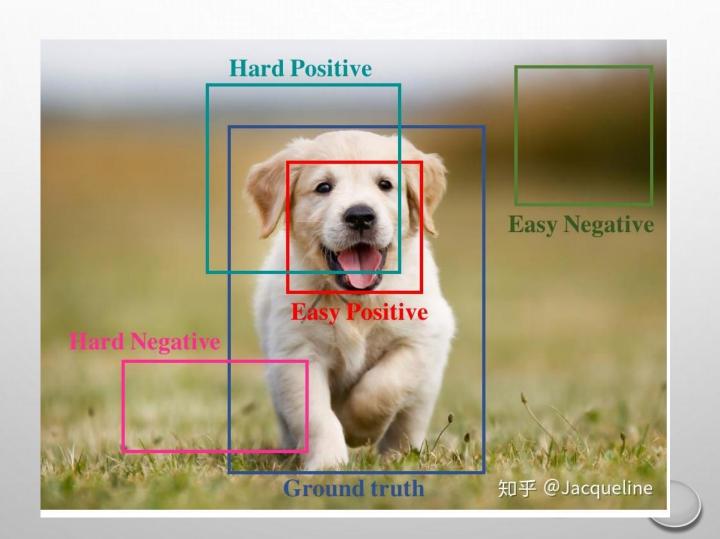

MAP

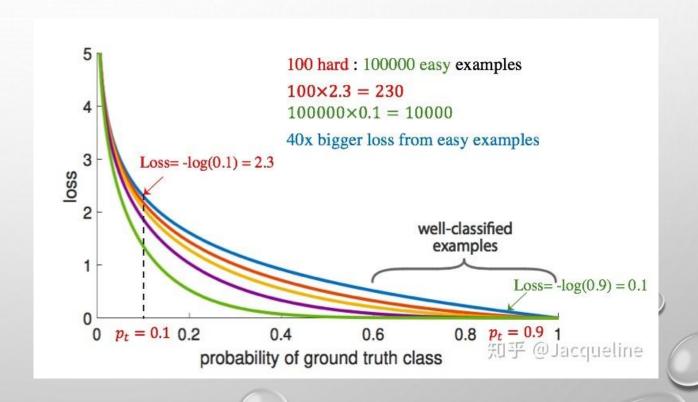

CROSS ENTROPY (CE) LOSS

$$CE(p, y) = \begin{cases} -\log(p) & \text{if } y = 1\\ -\log(1 - p) & \text{otherwise.} \end{cases}$$

$$p_{t} = \begin{cases} p & \text{if } y = 1\\ 1 - p & \text{otherwise,} \end{cases}$$

$$CE(p, y) = CE(p_t) = -\log(p_t)$$

BALANCED CROSS ENTROPY

$$CE(p_t) = -\alpha_t \log(p_t)$$

$$\alpha_{t} \begin{cases} \alpha & if \ y = 1 \\ 1 - \alpha & otherwise \end{cases}$$

FOCAL LOSS

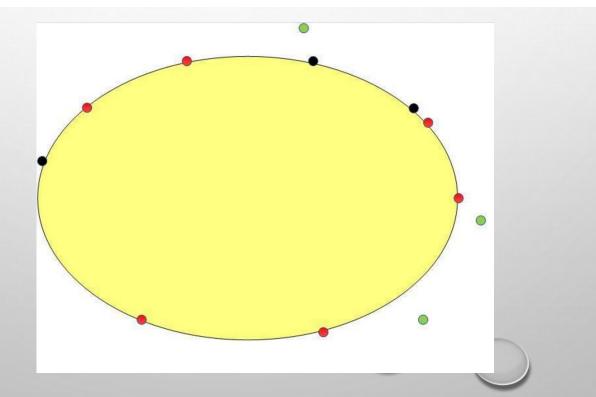

$$FL(p_{t}) = -(1 - p_{t})^{\gamma} \log(p_{t})$$

$$FL(p_{\mathsf{t}}) = -\alpha_{\mathsf{t}}(1 - p_{\mathsf{t}})^{\gamma} \log(p_{\mathsf{t}})$$

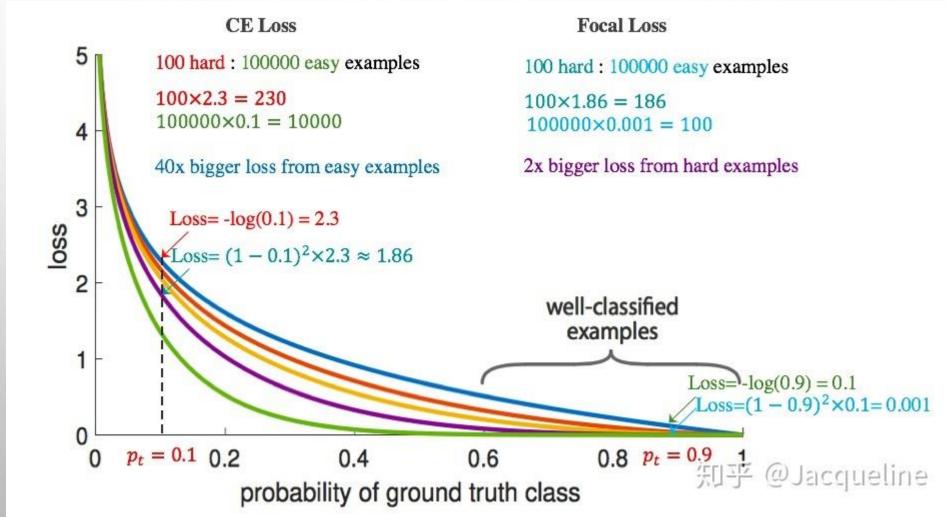

INLIERS

Loss	数量多的类别(如: Background)	数量少的类别
被正确分类时的loss	大幅下降↓	稍微下降↓
被错误分类时的loss	适当下降↓	几乎不变

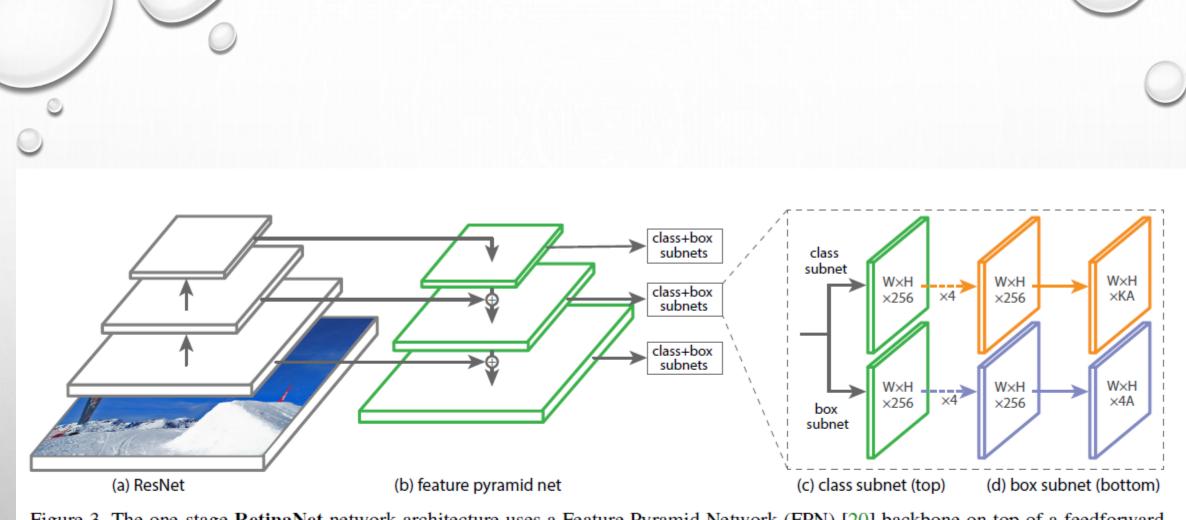

Figure 3. The one-stage **RetinaNet** network architecture uses a Feature Pyramid Network (FPN) [20] backbone on top of a feedforward ResNet architecture [16] (a) to generate a rich, multi-scale convolutional feature pyramid (b). To this backbone RetinaNet attaches two subnetworks, one for classifying anchor boxes (c) and one for regressing from anchor boxes to ground-truth object boxes (d). The network design is intentionally simple, which enables this work to focus on a novel focal loss function that eliminates the accuracy gap between our one-stage detector and state-of-the-art two-stage detectors like Faster R-CNN with FPN [20] while running at faster speeds.

(e) Accuracy/speed trade-off RetinaNet (on test-dev)

CONCLUSION

- DATA AUGMENTATION / TRUNCATION
- LOSS

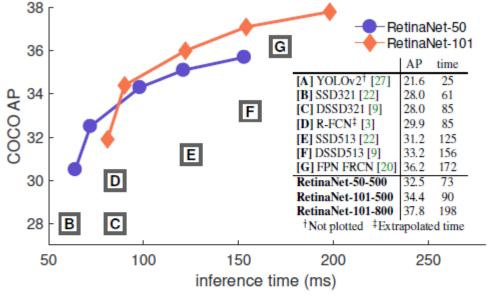

Figure 2. Speed (ms) versus accuracy (AP) on COCO test-dev. Enabled by the focal loss, our simple one-stage *RetinaNet* detector outperforms all previous one-stage and two-stage detectors, including the best reported Faster R-CNN [28] system from [20]. We show variants of RetinaNet with ResNet-50-FPN (blue circles) and ResNet-101-FPN (orange diamonds) at five scales (400-800 pixels). Ignoring the low-accuracy regime (AP<25), RetinaNet forms an upper envelope of all current detectors, and an improved variant (not shown) achieves 40.8 AP. Details are given in §5.
